

If the problem is orthopedic, whether caused by traumatic injury, chronic or degenerative disease or a congenital condition, the Orthopedic Center at Coliseum Northside Hospital offers a full range of orthopedic services from surgery to rehabilitation.

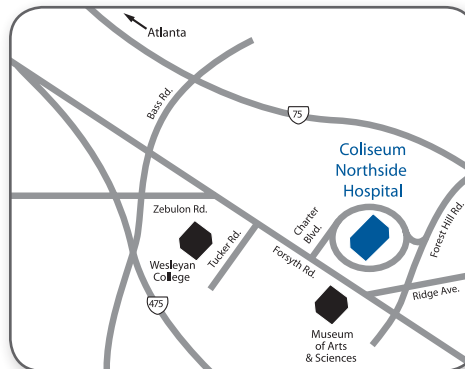

Orthopedics is the management and treatment of injuries and diseases of bones, joint and soft tissues (cartilage, ligaments, and muscles).

Using the most advanced diagnostic and treatment techniques, our team of physicians offer a broad range of clinical expertise.

Physical Rehabilitation

Under the direction of the attending physician, nurses work closely with physical and occupational therapy staff. Physical therapy may be prescribed as often as twice a day, including weekends, accelerating a patient's recovery. Schedules are closely monitored and patients are appropriately prepared with a medication to help them receive optimum value from their therapy. A full range of professional therapy programs are also available including speech and language therapy and biofeedback treatment.

Joint Class at Coliseum Northside Hospital

Classes are offered for patients who are going to have joint replacement surgery at Coliseum Northside Hospital's Orthopedic Center, every Tuesday at 12 noon, Coliseum Northside Hospital, 400 Charter Boulevard - Conference Room A. Please call 757-6296 or 319-7887 for more information.

Orthopedic Procedures

Total Hip, Knee & Shoulder Replacement

When a knee or hip joint wears out an orthopedic surgeon needs to surgically put a prosthetic hip, knee, or shoulder implant in the bone.

Arthroscopic Surgery

A surgeon can make small incisions around a joint and surgically fix joint problems. This includes knees, hips, shoulders, wrists etc.

Hand and Wrist Surgery

Usually this stems from fractures or arthritis. We have Occupational Therapist that specialize in hand/wrist rehabilitation.

Spine/Back Surgery

The spine is complex and multiple surgical procedures can be performed at our OR. Your medical condition may range from a herniated disc to a neck or spine fracture.

Sports Medicine

These surgical procedures are designed to get athletes back in the field as soon as possible. Multiple tendons and ligaments can be injured due to the repetition that is required in the field of sports.
