EXPERT
 PHYSICIANS

The Coliseum Cancer Program is accredited by the American College of Surgeons Commission on Cancer (ACoS CoC).

Call the Coliseum Cancer Center hotline, designed to help patients and caregivers, at 1-877-274-3910 for information, referrals, and support.

Comprehensive Program

The comprehensive lung treatment program at the Coliseum Cancer Center is where top physicians and staff work collaboratively to diagnose and treat patients with lung diseases and respiratory disorders.

An oncology nurse navigator works closely with you and your physician to schedule all necessary diagnostic testing. This service helps to expedite the rapid resolution of any abnormal findings. This prompt response decreases anxiety and allows for prompt treatment.

Conditions Treated

The comprehensive lung treatment program's expert surgeons and physicians provide comprehensive care for a wide variety of advanced lung diseases, including, but not limited to:

- Lung cancer
- Lung nodules
- Mesothelioma
- Pulmonary fibrosis

Services

- Chest X-rays
- Thoracic MRI
- High resolution CT scans
- Interventional radiology
- Bronchoscopy
- Pulmonary Function Testing (PFT)
- Pulmonary rehabilitation
- Treadmill and stress testing
- Video assisted thoroscopic surgery (VATS)
- Advanced thoracic surgery
- PET Scan (Positron Emission Tomography) is a powerful imaging technique that holds great promise in the diagnosis and treatment of many diseases, particularly cancer. It is a non-invasive test that accurately images the cellular function of the human body.

Endobronchial Ultrasound (EBUS)

The Coliseum Cancer Center is the first facility in the area to implement Endobronchial Ultra Sound (EBUS). EBUS is a lung cancer diagnosis technique allowing CT surgeons and pulmonologists to diagnose lung cancer by visualizing lymph nodes and surrounding vessels in real-time, via ultrasound, while simultaneously viewing the endoscopic image. It is a minimally invasive procedure that has proven highly effective. Patients recover quickly and generally go home on the same day of the procedure.

Multidisciplinary Panel of Physicians

If requested by your physician, our multi-specialty physician team reviews cases and determines the most appropriate treatment for each patient. This group is comprised of a cross section of specialties including pulmonology, thoracic surgery, cardiology, radiology, oncology, hospitalists (physicians who care for patients who are in the hospital), critical care, emergency medicine and pathology.

The nurse navigator serves as the patient's advocate, ensuring prompt treatment and follow-up and is a valuable resource for patient education.

Information for You

Our center provides information on the latest medical procedures, radiation scheduling guidelines and other lung health topics. Through personal consultation, videos, computer-aided instruction and a lending library, you can access the latest information on lung health, treatment procedures and care options.

Just One Call

The Coliseum Lung Health Center is designed to bring together a close range of services for your health and your convenience. All you need to do is call (478) 765-4805 or (877) 274-3910 to put yourself in touch with sensitive, knowledgeable professionals.
