Coliseum Rehabilitation Center Lymphedema Center

The Coliseum Rehabilitation Center provides comprehensive outpatient services in the management of Lymphedema.

Lymphedema is a disorder of the human lymphatic circulation that is marked by the accumulation of lymph fluid. Lymph fluid often presents in the form of swelling of the arms or legs and can almost affect any part of the body after the lymph vessels or lymph nodes have been blocked or removed.

We offer patients complete decongestive therapy which consists of:

- > Meticulous Skin Care
- > Compression Therapy
- > Manual Lymph Drainage
- > Remedial Exercises
- > Patient/Family Education
- > Wound Care

Our certified therapist is specially trained to address the needs of each patient. We are committed at Coliseum Rehabilitation Center to provide a supportive and learning environment that will enable our patients and families to become actively involved in their treatment plan and achieve a better quality of life.

Support groups are available to assist patients in coping with their condition. Monthly sessions are held on the campus of Coliseum Medical Centers. Please call the number below to learn more.
